

OPENING SOON

St Andrew's  
HEALTHCARE

We are delighted to announce  
that we are extending our  
highly specialist  
**neuropsychiatric  
pathway**

Opening in the Spring and accepting  
referrals now, **Church** is a new dedicated  
ward for men with an acquired brain  
injury, and co-occurring complex needs,  
cognitive deficits and behaviours that  
may challenge services.

Church ward will sit alongside the established Tallis at the beginning of St Andrew's Brain Injury pathway, helping to meet the demands of growing waiting lists across the sector. It will enable the multidisciplinary team to triage needs and select the most appropriate environment to rapidly stabilise people and support them to progress from admissions to rehabilitation wards at the very earliest opportunity. Allitsen and Tavener provide rehabilitation as patients move through our pathway towards community-facing houses adjacent to our main campus where they can test skills and prepare for their onward journey of recovery.

*'The creation of the 10 bed Church ward will enable people with a complex ABI or TBI to secure a placement that they so badly need whilst adding a crucial additional step in our service pathway between admission and rehabilitation'*

Dr Muthusamy Natarajan, Consultant Psychiatrist & Clinical Director  
for St Andrew's Neuropsychiatry Service

**St Andrew's**  
HEALTHCARE

To find out more about how Church and our specialist Neuropsychiatry service can help if you have a patient with severe cognitive deficit and complex behavioural needs please contact:
